

The WatIf health portal is one of the few complex applications that provides patients and doctors with leading edge noncommunicable disease management solutions that gathers clinical data from patients, process it through an interactive and intuitive medical knowledge Eco-system that forms part of its artificial intelligence to provide users with meaningful-use and outcome-based clinical information shared between doctors and patients.

The WatIf Health Portal is complex enough to suggests alternative disease management approaches that are based on recognized treatment protocols and guidelines. WatIf Health Portal helps users understand disease processes and the various health risks that are associated with it.

Users are in a position to store all their health information on one electronic device including medical images, prescriptions and laboratory results.
